Executive Summary

Mejuba

Headquarter:
Lakeland Florida
www.mejuba.com

Industry Social Media

- \$716M (US only) market in 2009 will grow to a \$3.1B market by 2014 according to Forrester.
- Currently, over 1.5 Billion users worldwide expected to grow to 2.5 Billion by end of the decade.

Investment

- \$2.0 M (USD) for 35% of Common Stock

Market Opportunity

Today, there are over 1.5 billion worldwide social media/photo sharing users, it is estimated that 10-20% of the total users pay between \$50-\$250 a year to store all of their photos. By the end of 2014 Forrester Research projects growth of 300-500 million users, and to reach 2.5 billion users before the end of the decade. One of the internet's hottest sectors for this decade is photo sharing. Taking and sharing photos is now a basic social interaction, enabled by the fact that consumers have a mobile camera in their pocket all the time. For social media sites, photo services have become the primary focus. Moving forward, users will expect more functions, more service and better quality. They are looking for one destination to store those photos, learn from others, purchase cameras, software and equipment. Mejuba will fill this hole.

Investment Opportunity

Seeing the opportunity in the social media market, Mejuba's Founder developed this plan and provided the initial \$350,000 funding. Since photo services are the foundation of social media sites, Mejuba has a two-staged development process.

- First, create and launch a Beta web venue with the most cutting edge photo/video service on the web. This is completed, Mejuba currently hosts 20,500 subscribers and this will be the base to attract new customers.
- Second, create needed social elements and launch a full-scale social media photo-sharing venue. Mejuba requires \$2.0M in funding to finish this stage and bring the company to a positive cash flow position.

Strategic Advantage

While there are many websites that offer photo sharing, there is no destination that users can go to share photos, learn from other users, and purchase cameras, software, and equipment. Mejuba will be the destination that prosumer users go to share photos, learn from others through workshops, forums and one place to purchase all of their needs such as cameras, videos, and equipment. Mejuba is currently the only photo site worldwide that offers free and unlimited uploads and traffic, for both photos and videos. There is no upper limit for the play length of videos, file size or resolution for photos. The original is saved and can subsequently be downloaded along with the converted file. These free features are very attracting to the internet social enthusiast. With no marketing, Mejuba's Beta site has attracted 20,500 users and been rated in the top 10 photo sharing sites. We plan to continue to allow users to enjoy the Freemium model while we provide a upgrade service for the amateur and professional users (prosumers).

Business Model

Mejuba is following the tried and true model of "give away the razor and sell the blades" which is the same model Flickr, Photobucket and others in the space are using. Mejuba will provide popular photo and video services for free and charge for secondary services. Mejuba projects reaching 1m subscribers (less than .1% of market share) to achieve its financial projections.

Executive Summary

Financial Projections

- Cash Flow Positive in the 14th month
- Projected 5 Year Financials all USD
 - Number of users 1.2M an estimated market share of less than 0.1%
 - Y5 Revenue \$63M
 - EBITDA \$22M
- Target Exit in year 5
 - when number of users is approximately 1M
 - Expected Exit Sale would be \$150-\$220M

Rollout Strategy

- Currently in Beta – Maintain Beta for 6 months while completing Social Media portion of web venue.
- Full Launch
- Quickly hit 95,00 users to become cash flow positive
- Maintain flexibility and change product offering to meet customer needs and increase revenue

Executive Team

Founder, CTO – Nicolai Busekist
CEO- Chad Dearey

Strategic Advantage

The photo space has been shifting over the last 5 years. Some of the big boys such as Facebook, Photobucket, Shutterfly and others will continue to hold large grabs of users however, the market that still has a lot of weeding out is niche groups. Mejuba is capitalizing on the prosumer market where there are only 4 true competitors. Mejuba will be the only prosumer website that offers photo sharing, ecommerce, and training. Professional photographers will have a easy place to set up all of their business needs, they will have a branded site that promotes their brand and they will keep 100% of the profit (minus taxes and credit card fees). Experienced users will have the ability to use beautiful displays to showcase their work, a place to buy all camera related needs, and a place to learn more from seasoned professionals. Novice users will be able to store photos for free and if they have the option to upgrade and use all of our other services as well.

•**Staff** - Mejuba will not have a large staff of in-house programming staff building and maintaining the web venue. Rather Mejuba will use the Founders experience in outsourcing, thus having a lean internal staff focused on integration and customer service.

•**Marketing** - Mejuba plans to do aggressively market the web with SEO, PPC, advertising.

•**Network Operations** - This lean approach will also be used in with their network operations. Here Mejuba will outsource all data center operations minimizing the need for facilities and staff to maintain the server network. This operational strategy keeps Mejuba lean, flexible and able to quickly move with their subscribers.

Exit

Mejuba is building to exit in 3-5 years expecting to sell to a strategic buyer who does not have these services internally, or wishes to expand in areas of Mejuba's strength. Projected EBITA in Year 5 is \$22M which will bring an estimated \$150M total valuation/sale of the business giving the investors a \$30M return

the blades

History

Mejuba (inc.) was founded in by the Danish IT engineer Nicolai Busekist, the company is now located in Lakeland Florida, where CEO, Chad Dearey resides. Nicolai is the majority owner of Mejuba and has funded its initial launch and beta version of this social/photo sharing web service. Mejuba will be registered as a trademark through the Madrid-protocol covering 85 countries.

Vision

Mejuba will become one of most popular prosumer websites in the world. This will be achieved through leveraging the 100% free photo and video services that no competitor offers, constant innovative development, strategic partner agreements and aggressive marketing.

Product & Service Offering

The prosumer market is a community of amateur and professional photographers that deeply care about the resolution, style, and original format of their photos. These enthusiasts are currently paying \$100 - \$250 to have all of their photos stored in the original format along with the opportunity to create a branded storefront. Mejuba will use it's freemium model of 100% free service for uploading and sharing of photos and videos on the internet to attract users to the site, and up sell them on the prosumer advantages. Mejuba users can upload a limitless number of photos and videos free of charge and without restrictions on the size of files or length of videos. All uploaded material can be downloaded again in its original form, so Mejuba also functions as a valuable backup tool.

Mejuba is currently in its beta release seen at www.mejuba.com. The site offers services free of charge and is currently supporting over 15,500 subscribers. Competitor sites set restrictions for the use of their services, either by scaling pictures down, limiting the amount of time, or by demanding payment for what Mejuba offers for free. Mejuba neither scales down nor restricts the length and resolution. Mejuba attracts customers with it easy to use free photo/video services. Mejuba retains its customers in it social community experience.

In August 2010, Buxr magazine rated Mejuba as one of the world's ten best free photo and video services, along with the world's biggest: Picasa, Flickr, Photobucket, Kodak, Snapfish and Shutterfly . In September 2010, Mejuba was named as one of Denmark's 20 best startups by ComON. This has been achieved during beta launch with no marketing.

Business Model

Similar to many in the internet space, Mejuba provides an essential base service at no charge creating revenue from additional services. Mejuba has 5 primary revenue sources currently planned. Each of these sources is expected to expand, as well as more sources created over time. A deeper explanation of these services can be found in the Product/Services section.

- Subscription Services – an array of value added services that existing members are requesting such as branded websites, and sharing features
- Printing Services – a large variety of hardcopy prints, print on pens, mugs, towels, including photo album and photo calendar creation and printing.
- Business Services – a merchant platform providing members to sell their photos and videos. Business community can also use weblinks for video training, sales presentations etc. with no restriction to length or resolution.
- Ecommerce – Buy Cameras, Video cameras, photo software, smart phones,
- Training – Amateurs will be able to take work shops, and training with our seasoned team, and the professionals will have a audience to teach.

Strategy

Marketing

Mejuba's marketing strategy is to aggressively target the established users of existing sites. The overall theme is a one stop place for all of your photo/video needs. Mejuba will launch a campaign on Facebook, the largest and most viral network, with over 800 million users with the highest conversion rate for ad campaigns. This campaign is to be supplemented with extra advertisements on YouTube and other relevant social media sites. Facebook has the most effective advertising structure, by making it possible to target recipients precisely according to geography, age, shared interests etc.

Mejuba also plans to run aggressive campaigns with some of the top Professional photographer websites. The photo sharing industry is extremely clustered and users rely heavily upon professional blogs advice on where to store their photos. We have made significant inroads with some of the top photographers in order to capture the

Competitive Edge

No other site but Mejuba offers pro-sumers the opportunity to store photos, learn from others and buy cameras, videos and software. Mejuba will continue to offer free and unlimited uploads and traffic, for both photos and videos. The only restriction on Mejuba is a file size of 1GB for uploads. For subscribers the 1GB per upload limit can be raised to 3GB per upload. The 1GB restriction is mainly set to avoid abuse.

There is no upper limit for the play length of videos or the file size or resolution for photos. The original can be saved and subsequently downloaded along with the converted file; an option only also offered by Smugmug – for 45 US\$ per year. Facebook, MySpace and Flickr are the only sites that, like Mejuba, exploit the social networking element. Here, you can invite friends and family, find new friends, join groups and limit access to your albums to particular friends and family members. Mejuba benefits greatly from this social aspect, as networking has become “good business”—just look at Facebook.

Mejuba is free from advertising for pro users! Mejuba is clean of any distracting and insistent ads. Mejuba is distinct from competitors in other ways, too: it is perhaps the most user-friendly site there is. It is easy to navigate, with a response time that is among the fastest and best of all the afore-mentioned sites, with a light, welcoming design. In other words, you're in good company. Every day Mejuba receives emails from users praising its user-friendliness.

No other social media site offers photo sharing, training and buying

Users are looking for more photo/video features and willing to move to get them

Strategy

Strategic Alliances

Mejuba has teamed with GoSocial (Europe's top advertising agency) to create Mejuba's online advertising campaigns for your Europe and implement its social media strategy. For offline or standard marketing and advertising Mejuba will use Rethink Advertising, one of Europe's top brand agency's. Mejuba has partnered with Previewnetwork (www.previewnetworks.com) to provide streaming services to Universal Studios, Paramount Studios, Warner Brothers and other large content providers.

Exit Plan

If this ramp-up can be achieved, Mejuba's expecting to exit in 5 years based on the attraction of its subscriber base and revenue. Mejuba's projected revenue is \$63M with a NET of \$22M with a market value over \$150M. Mejuba could potentially be acquired by any of its current competitors such as Smugmug, Phanfare, Zenfolio or storage sites such as Dropbox, iCloud or BOX.net

Valuation

Product & Services

Product & Service Description

Mejuba.com is the world's first social community that gives users a an opportunity to share photos, learn from others and buy related goods. Currently Mejuba is 100% free service for uploading and sharing of photos and videos on the internet. Users can upload unlimited photos and videos free of charge and without restrictions on the size of files or length of videos. All uploaded material can be downloaded again in its original form, so Mejuba also functions as a valuable backup tool. However, when we re launch we will turn into more of a freemium model and pro users will have distinct advantage over a free account such as a personal branded website, a destination to sell the photos and videos, and no advertising.

Positioning of Products and Services

Mejuba will leverage the fact that they are the only website that offers 100% free photo and video services while providing a host of client demanded services listed below. Current beta version of the website offers the photo and video services. The revenue based services will be finalized and launched with this funding round.

Photo – Existing

Nearly all photos taken today are digital. Online storage, backup and presentation of photos are a growing demand. Today, there are a great number of services where users can upload their photos, each with their own strength and weaknesses. As the traditional camera is melting into the mobile phones marketing research estimates the growth of people keeping photos online to increase between 300 to 500 million over the next 5 years.

Video - Existing

Video has become increasingly popular over the past few years. All new mobile telephones, along with most digital cameras, are now able to record video—some in HD (High Definition).

Almost all those sites offering video uploads set limits. YouTube, the most popular video hosting website limits uploads to 15 minutes in play length, while Smugmug is limited to 10 minutes and MySpace to 20 minutes. Flickr, meanwhile, is only 90 seconds. The only photo and video hosting site to match Mejuba is Picasa, where neither the original nor the converted file can be downloaded.

Many of these sites have been impeded because disc space was simply too large an investment just 7-8 years ago, when most of these sites were established. Their business concepts have been based upon users covering these costs—which is why they were started (and continue to be) pay-to-use sites. The price of Disc space has now fallen dramatically and the trend is towards even lower prices. It is now possible to use Cloud Solutions, offering unlimited, decentralised storage space for a very small price in large data centres. Cloud products have dropped considerably in price over the last two years and it is clear that data storage is becoming cheaper and cheaper. This puts the pressure on the payment sites.

Storage Services - being built

Nearly 25% of all of our current users said that they would pay \$3-\$5 per month to store unlimited amounts of Word, Excel, and Audio files

Subscription Services - To be built

Existing customer have requested a number of paid services. The first paid services include:

- Conversion of photos and videos to DVD,
- Backup of uploaded photos and videos,
- Conversion of analogue to digital photos, videos.
- To upload full size videos (greater than the current 1GB limit).

Printing Services - To be built

Mejuba will host a small array of items customer can have their pictured printed:

- Mugs and Plates
- Tee shirts and Sweat Shirts
- Photo Albums and Photo Calendars

Mejuba is looking to establish partnerships with producers of video cameras and mobile telephones companies, sports equipment manufacturers, sports organisations, car clubs, consumer groups and others who see the advantages of being able to offer a personalised universe for their customers/users. Nokia, Apple and Ericsson all have their own photo uploading sites.

Business Services - To be built

Mejuba will introduce a market place for professional photographers and video makers to present and sell their work, with Mejuba taking a commission for sales., much like Zenfolio, Phanfare or SmugMug. Mejuba will also offer the business community weblinks for video training, sales presentations etc. with no restriction to length or resolution.

Streaming Service - To be built

Mejuba will offer the chance for both individuals and companies to stream their videos as a pay-per-view service. Mejuba has partnered with Previewnetwork (www.previewnetworks.com) to provide streaming services to Universal Studios, Paramount Studios, Warner Brothers and other large content providers.

Advertising

Mejuba will wait to host advertising until ensuring a large number of subscriber, Mejuba will allow advertising as a natural source of revenue. Specifics of how that will be introduced and used will be determined at that time as internet advertising continues to be flushed out.

Product & Services

as technology
develops
Mejuba will
respond

Future Products and Services

Mejuba is under constant development, both when it comes to new functionalities but also in terms of security, cross-browsers, response times, user-friendliness and Search Engine Optimization (SEO). First and foremost, Mejuba is to receive a new and even more user-friendly design. This will make Mejuba more 'Web 2.0', as well as increase usability, improve security and make SEO even more effective.

Since the development of Mejuba started three years ago technology has developed and possibilities opened that require Mejuba upgrades in a number of areas. Being able to ensure higher levels of security, quicker response times implement payment modules and develop API as well as to make use of new technical opportunities is a necessity. This is equally valid for video conversion, where HD video quality—amongst other things—is now possible.

During its beta period, Mejuba has received innumerable suggestions and requests for new functions to be implemented, including requests for Eye-Fi support, multiple languages and support for the upload of file type other than photo and video.

Smartphones are not only used for talking but increasingly for taking photos and videos. Mejuba will look into the possibility of using Eye-Fi, a program that automatically transfers photos and video from users' smartphones to their Mejuba account. This has the potential to generate huge success. Mejuba is not the only one offering this service, and cannot charge for the service, but it does place Mejuba in a good position with its users. Flickr and Photobucket already support Eye-Fi.

Market Analysis

Overall Market

The market for online digital photo and video sharing is increasing rapidly, in part because traditional analogue film and video is on its way out, but also because of the explosive growth in handheld devices that allow both photos and videos to be posted and shared on the internet.

The number of people using the ten largest photo and video sites is over 1.5 billion, and it is estimated that this number will grow by 300-500 million new users within the next three years, and exceed 2.5 billion by the end of the decade (Forrester Research). One example is a country such as India with a population of 1.2 billion, which is only now starting to use the internet. In China, there are already 400 million internet users—a figure that is rapidly growing. In Europe, one in ten people own a digital camera or a mobile telephone with a camera, photo and video uploading function.

The prosumer market is growing like a hockey stick, more and more people are using online photo sharing to be the place where they archive their photos. Amateurs and photographers are relying more and more on websites like Smugmug, Zenfolio, and Phanfare to not only store their photos but to help them run hobbies or their businesses. The continued growth in this market not only shows that users are desiring that their videos and photos be stored in displayed in their best format but that they are willing to pay a premium to have it done correctly.

today...
Market to
grow over
2.5 billion
in this
decade

Market Analysis

Market Segments

The market has three primary segments

- Social community sites
- Photo and video sharing sites.
- Sites that have both social community and photo/video sharing.

Whereas the main focus of social community is on social relations, photo and video sharing services focus on the sharing, storing, editing and professional sale of photos and videos. Flickr, is primarily a photo and video sharing service, they do have social elements but are not consider a true competitor in the space.

Photo sharing sites can be subdivided up into two groups: those that offer free photo and video hosting and those that charge its users for the service. The free sites can be split again into those financed by advertisements and those where image hosting is a means to sell products and site services. Paying sites generally offer a downscaled free version, though they have many restrictions—on traffic, number of uploads and storage space, as well as on the number of days the free trial lasts. Below is a list of the three most used image hosting sites.

Customer Characteristics

Mejuba already has more than 15,500 members after a thorough beta / test period. The members have been joining solely through word-of-mouth for the past two months. Mejuba has not spent any money on marketing or advertising, but a marketing campaign on Facebook is planned after full development. In addition, Mejuba plans to use the same campaign with already established users.

Mejuba has set a target of reaching at least one million users within a five-year period, to come through advertisements, referrals, search engines as well as word-of-mouth.

It is a safe bet to assume that a great number of these new members will come from competing sites. This is clear from reading the comments in blogs and emails from Mejuba's members who have already made the switch.

Customer Profile

A breakdown of the world's internet users puts China at the top with 20.8% of the world's users, followed by the USA with 13.1%, Japan with 5.5%, India with 4.7% and Brazil with 3.9%.

As it looks today, the target group is extremely broad and predominantly English-speaking, followed by French, Italian and Spanish. The majority of Mejuba users come from the US and Canada, followed by Italy, UK, France, Spain and Brazil. Appendix 2 shows the full list.

Mejuba's current users are generally over 25, with an even distribution of men and women. Mejuba expects that US will as a single country contributes with the largest number of users whereas Europe will contribute with the largest number of users as a continent.

Market Segments

Competitive Analysis

Industry Overview

The competition for photo and video services is broken into two groups, general photo sharing websites and prosumer websites. Our goal is to tap into a niche and only focus on the prosumer market. The general photo sharing market is tough, and the players are owned by some of the biggest IT companies in the world. Flickr is owned by Yahoo, Picasa, Orkut and YouTube by Google, Photobucket and MySpace was recently sold by News Corp, Bebo by AOL, Snapfish by HP and Windows Live Spaces is owned by Microsoft—to name but a few. Despite not having the same international muscle, Mejuba will build its own niche in the prosumer website.

Primary Competitors

Flickr has 20 million unique monthly (compete.com) users and offers both photo and video uploads. Flickr has many professional photographers among its users and has a large community. It is possible to invite friends to join as well as become friends with other users, making Flickr a sort of social network, where users are able to communicate with each other about their common interests.

Flickr offers two types of account: free and Pro. The free account allows the upload of 100 MB and 2 videos in low resolution per month. If a free account user uploads more than 200 photos, only last 200 will be accessible. If a free account remains inactive for 90 consecutive days it will be deleted. Free accounts do not allow access to original files. If the account is upgraded to a pro account, access to the originals is granted. Pro account, access to the originals is granted. Pro account users are allowed unlimited uploads of photos and videos as well as unlimited traffic. The playing time for videos is 90 seconds. A Pro account costs 25 US\$ annually and is free from advertising—the free version is not.

Smugmug with 2.5 Million unique monthly users (compete.com), they have gained a lot of popularity from the photography enthusiasts. Smugmug is clean, sharp and has a strong community. Smugmug has 3 different pricing options \$40 per year, \$60, and \$150. The \$40 and \$60 version are geared for enthusiasts, and the \$150 version is available to those who are looking to sell their photos. The main complaints regarding the site is that the options are too complex and

Zenfolio is averaging 800,000 unique monthly users per month (compete.com), and have a very similar user base as Smugmug. The fans have appreciated the customer service, and the user experience. Some complaints have been made regarding the limited amount of branding that is available for the professionals. Zenfolio launched in 2005 via angel funds and has been growing ever since.

Phanfare is averaging 130,000 unique users per month (compete.com), and have had a tough time determining who they want to be. They started in the prosumer market, shifted to try social networking and are now back to the prosumer model. They had over \$5,000,000 in venture capital and recently sold the company for \$2,000,000 to Carbonite.

General Competition

Facebook is without a doubt the largest of the social networks, with over 800 million users. Anyone can post a limitless number of images on Facebook, and it is now also possible to download them again. Facebook has recently announced that as of October 2010, users can now upload photos of up to 4 MB in file size. Videos can also be uploaded of up to 10 minutes in playtime or with a maximum size of 200 MB. The original is not saved. Facebook's conditions for uploading photos and videos have been heavily criticized, as they ensure that Facebook 'owns' all material that is uploaded while simultaneously giving Facebook the right to use this material commercially.

Competitive Analysis

General Competition

MySpace has 130 million users and was the most popular of the social networking sites until 2008, when Facebook overtook it. MySpace allows its users to upload photos and videos, but neither uploaded photos nor videos can be downloaded again; similarly, it's not possible to edit your photos. Videos are limited to 500 MB or 20 minutes. Over the last two years MySpace has lost a lot of its ground, particularly to Facebook and Twitter

Photobucket has 100 million users, making it the largest of the image and video hosting sites. Only Facebook gets more uploads per month than Photobucket. Photobucket offers both a free and a paying version; the latter, 'Pro' costs 25 US\$ a year. The free version allows 500 MB of free disc space and 10 GB traffic per month. The highest resolution allowed is only 1024x768, or a video of 5 minutes' playtime or 100 MB in file size. The paying, "Pro Account" allows videos of up to 10 minutes in length, 2 MB or a maximum resolution of 4000x3000 for photos and an unlimited amount of traffic. Pornographic material is not allowed. Photobucket does not resemble a social networking site, and lacks the friend's concept and a community. The paying Pro account is free from advertising—the free version is not.

Picasa Web Album (PWA) has around 40 million users. Picasa is both a PC/Mac application and an online photo and video hosting service. What follows is a description of Picasa Web Album. PWA offers 1 GB of disc space and videos can be uploaded without a limit on play length. Videos can only be uploaded from the desktop software—not directly from PWA. The uploaded photos can be downloaded again, while neither the original video nor the converted version can. For a fee of 20 US\$ a year, users can buy an extra 10 GB of disc space. Picasa does not resemble a social networking site, and lacks the friend's concept and a community. Should a user go over the 10 GB disc space, the next step costs 70 US\$ annually for a further 10 GB disc space.

Microsoft-owned Windows Live Spaces (WLS) has more than 130 million users. WLS allows up to 25 GB of space for photos and videos. Although it is possible to upload videos in WLS it is not possible to play them, and WLS can therefore be considered solely as a backup when it comes to video. The option to manipulate photos is very limited. WLS does not have a distinct social network.

Twitter has more than 160 million users. Twitter is primarily a micro blogging network based on text messages without pictures or video. From 2010 it became possible to link to images and videos hosted by other sites—for example Mejuba—though Twitter itself does not offer the option of uploading photos or videos.

Qzone is Chinese and has more than 320 million users in China and Chinese-speaking nations. Qzone is only available in Chinese. According to unofficial data, Qzone may be the most active of all the social networking sites. Unlike almost all the other social networking sites Qzone is not free, and there is a charge for every service used.

Bebo is another large social networking site, with 117 million users. Like MySpace the focus is on social contacts and networking, and there is no option to download or edit photos. Video cannot be uploaded, but it is possible to post a link to videos hosted on other sites.

Competitive Analysis

The market is huge and there are only 4 direct competitors...

Strengths

Mejuba will be the first website to incorporate photo sharing, buying and training all into one site. While there are really only 4 competitors in our space, we are the only one offering this full business model. Being the first to market will be a strength for Mejuba.

Weakness

All of the 4 competitors could add ecommerce and significant training if they saw users moving to our website. The competitors have provided photo sharing for many years and it could be difficult to break into their user base.

Opportunities

Growing niche market, growing user base. More and more users are comfortable paying money to upload their photos. Mejuba has built a nice base of users by offering a free model, this base will provide a unique revenue model for advertisers.

Threats

Tough economy, and people are looking to cut as many frivolous costs as possible, will they see this as a want or a need? The market for the prosumer is a small niche in the overall industry and

Operations

Organizational Structure

Mejuba will have flat organization with Chad Dearey and Nicolai Busekist as the driving forces of corporate vision and overseeing daily operations. Mejuba will keep headcount to a minimum hiring for critical internal operations and utilizing outsourcing resources for development and marketing.

Nicolai Busekist has extensive experience managing large development and operational outsource teams. Nicolai's vision is to keep headcount low and, therefore, overhead low, hiring highly experienced outsource groups to complete tactical elements while Nicolai and his team focus on the overall strategic direction and integration of the website/services.

Hosting Services and Changes

Hosting is Mejuba's backbone and is critical to its success. Everything must run perfectly, with a high level of security and backup and investments must be made into this area. Cloud hosting has been tried out, but in its current form a poorer alternative to traditional hosting, due to non-transparent price structuring and excessive traffic costs, among other factors. Also, data, when first put up in the cloud is hard to move to another hosting environment at a later time. Backup will however be run through Cloud Solutions.

Mejuba's hosting is currently made up of four managed servers hosted in Canada. The current hosting set-up works fine for a limited number of users (< 100,000) and has a good response time. In keeping with the increase in users the system needs to be changed to a more professional and scalable set-up.

Operations

Mejuba has received an offer from HP and DELL for a complete SAN storage. Both offers are around \$450,000 for the hardware alone, on top of which are maintenance, traffic and hosting costs. In the current state, this solution is considered too costly.

Mejuba has also received an offer for purchasing, maintaining and hosting a SAN storage solution from a Danish bidder. A complete set-up, including servers and disc space as well as traffic has been calculated at around \$8,000 a month for the first 12 months, a figure that will grow close to exponential along with increased disc space.

In the start, Mejuba is to use a hosted solution. If Mejuba wishes to set-up its own hosting at a later time, this will be possible without any major changes.

Operational Backup

Mejuba will use a Cloud solution for the backup. As a storage facility only, this solution is 100% scalable and relatively cheap per used GB. Charges are calculated per GB used at a rate of \$ 0.15 per GB per month. In addition there is a charge for data traffic of \$ 0.10 per GB (the price for Amazon EC2 and Windows Azure). The charge for uploading and storing 1 GB over 12 months is under \$2.

outsourcing

Outsourcing

Mejuba will outsource most new development to other known software houses. A network and servers will be set up to coordinate and integrate all development.

Programming

Mejuba will update security features and a number of other technical features.

Below are the items to be implemented.

- Mejuba will hire one or more experts in database design, hardware set-up, internet security and web development to ensure the best possible and future secure foundation.
- Mejuba will update the existing look and feel, making it the site more user-friendly and able to utilize and implement the new technical possibilities of the internet.
- The video converter and Mejuba gets re-factored to implement new internet possibilities and also optimising security as well as other necessary additions, including SEO. For this, external expertise within Internet security and infrastructure must be involved.
- A scalable backup solution is established. A Cloud Solutions is to be used due to its cheap storage price.
- An optimum international payment system is implemented.
- Programming of Iphone, Android and other applications are started up.
- Mejuba is translated into Chinese, French, Italian, Spanish, Portuguese and German.
- It is estimated that these functions can be up and running within 180 days.
- After this, a new marketing campaign is to be launched on Facebook in five selected languages. A full-time programmer is to be brought in who can work in partnership with the outsourced agencies. Future project development is to be undertaken locally in Denmark by Nicolai Busekist and the afore-mentioned employee. This will be better financially and also ensures that Mejuba can support, fix and correct any critical problems that may arise.
- Larger assignments requiring substantial manpower will be outsourced to external suppliers.
- Freelance advisors in business development and administration are to be hired and a board of directors formed, which will be made up of three people with the relevant backgrounds—that is, with experience in developing internet activities.

Operations

Full Launch

Mejuba.com is developed into a desktop program for both Mac and Windows users. Mejuba is translated into different languages, and existing ones updated. Using data compiled from earlier marketing campaigns, a newer, larger campaign is launched.

Facilities

Moving out of Beta, Mejuba will establish a new office to house 4 people. As the headcount grows over time the space will either be expanded or a new bigger office will be established. Depending on the success of Mejuba foreign offices would also have to be established in order to a more local presence.

Management Team

Founder, CTO- Nicolai Busekist

Nicolai Busekist is 41, holds a degree as Electronics Engineer from Copenhagen Engineering College. Fifteen years ago Nicolai founded Pocket Inc., an IT consulting company that works for some of Denmark's largest corporations. Pocket Inc. specializes in Microsoft .NET, SQL Server programming and server infrastructure. This has given Nicolai a broad technical foundation, the opportunity to work in many levels of an organization, and a great expertise in IT outsourcing. In 2009 seeing the market opportunity and growth of social media and use of video, Nicolai launched Mejuba and funded its initial start-up to the current Beta version of the website. Nicolai Busekist is married with two children and lives in Hellerup north of Copenhagen, Denmark.

CEO- Chad Dearey

Chad is 35 years old, and has been self employed in one fashion or another since his early 20's. Chad started a mortgage business in the height of the mortgage boom of the 90's building a team of 30 employees and multiple offices. Chad's most recent role was VP for a international Merger and Acquisition firm which worked with companies valued at 10-100 Million.

Director of Programming - To be hired on funding – This position will be a senior designer and programmer.

Programming Manager - To be hired on funding – This position will be a senior programmer.

VP of Marketing - To be hired on funding – This position will require a person with a broad marketing experience including social medias.

Online Manager -To be hired on funding – This position will be a seasoned computer engineer.

The image shows a screenshot of the Mejuba website. At the top left is the 'meJuba' logo. Below it are links for 'Why', 'About', 'Sign Up', and 'Search'. On the top right, there is a login section with 'Email' and 'Password' input fields, a 'Login' button, and links for 'Remember me next time' and 'Forgot your login?'. The main heading is 'Upload your Photos and Videos' with a subtext 'Sign Up Today - It only takes a minute and it's free'. Below this is a section titled 'GET ALL OF THIS AND MUCH MORE' listing features: 'UNMETERED TRAFFIC' (no restrictions on monthly traffic or quotas), 'DOWNLOAD OF ORIGINALS' (always access to your uploaded originals), 'NO SCALING OF PHOTOS' (uploaded photos and videos are saved in the original form), 'UNLIMITED STORAGE' (upload and store as many photos and videos as you want), 'UPLOAD FOLDERS' (upload folders while retaining your PC folder structure), and 'NO FILESIZE LIMIT' (upload up to 1GB per upload). Below this is a 'FOR FREE' section with the text 'Others claim to be free - we are!'. The bottom of the image shows three columns of content: 'Upload Photos and Videos' with a camera icon and text 'Upload as many and as often as you want. There is no restriction on the number or size.', 'Share with friends and family' with a camera and monitor icon and text 'Share your Mejuba with friends, family and others. You decide who has access.', and 'Free, free, free' with a camera and globe icon and text 'On Mejuba it's all free! Unlimited storage for your photos and videos. No metering or quotas.'

Operations

Board of Advisors

Frederick Van Johnson

Founder at MediaBytes! and The This Week in Photo Show (TWiP). Host and principal operator of This Week in Photo — the Internet's most popular photography-related podcast. Maintain an extensive list of contacts in the tech & photography industries, interview luminaries, manage overall production of the show, and oversee the web site, all TWiP-related events (Meet-ups, workshops, etc). Appear weekly on the show to discuss topical news, reviews, and conduct interviews.

Steve Madden

President of promotional brand marketing company based in Lakeland Florida that employs 33. Brand identity development, apparel decoration and vertical distribution for online stores are just a few of the services Madden provides to clients in 27 states. 2010 revenues place company in top 75 nationwide among promotional marketing firms.

Mark Jordan

Managing Partner of Investment Banking Firm, Author. Investment Banker and M&A advisor specializing in representing companies in the sale and acquisition of middle market businesses with values over \$10,000,000.

Author of *Selling Your Business: The Practical Guide to Getting It Done Right* (Decere Publishing 2010), *Driving Business Value in an Uncertain Economy* (Decere Publishing, 2009), *Selling Your Business The Hard Way* (Decere Publishing, 2008), *Enhancing Your Business Value...The Climb to the Top* (Decere Publishing, 2002), and co-author of *The Business Sale...A Business Owner's Most Perilous Expedition* (Decere Publishing, 2001). Also author of numerous articles on mergers and acquisitions.

The screenshot shows the Mejuba website interface. At the top left is the Mejuba logo. To the right are input fields for Email and Password, with a 'Login' button and links for 'Remember me next time' and 'Forgot your login?'. Below the login area is a navigation bar with links: 'Why', 'About', 'Sign Up', and 'Search'. The main content area features a large image of a beach scene with a thatched umbrella. Below this is a search bar with a 'Search' button and checkboxes for 'Photos' and 'Videos'. To the right of the image is a section titled 'Upload your Photos and Videos' with a sub-header 'Sign Up Today - It only takes a minute and it's free'. Below this is a list of features under the heading 'GET ALL OF THIS AND MUCH MORE':

- UNMETERED TRAFFIC** no restrictions on monthly traffic or quotas
- DOWNLOAD OF ORIGINALS** always access to your uploaded originals
- NO SCALING OF PHOTOS** uploaded photos and videos are saved in the original form
- UNLIMITED STORAGE** upload and store as many photos and videos as you want
- UPLOAD FOLDERS** upload folders while retaining your PC folder structure
- NO FILESIZE LIMIT** upload up to 1GB per upload

Below the features is a section titled 'FOR FREE' with the text 'Others claim to be free - we are!'. At the bottom of the page are three columns of text:

- Upload Photos and Videos**: Upload as many and as often as you want. There is no restriction on the number or size. (Read more)
- Share with friends and family**: Share your Mejuba with friends, family and others. You decide who has access. (Read more)
- Free, free, free**: On Mejuba it's all free! Unlimited storage for your photos and videos. No metering or quotas. (Read more)

Financial Projections

Assumptions – Below is each line item of the P&L projection and the basis for its projection.

User Adoption Rate & Sales

Users – Currently Mejuba hosts 12,500 subscribers in its beta operations. This has been accomplished without market, all viral and organic over a 6 months period of time. After launch is completed and marketing campaign started 75,000 users are expected to join in Year 1, another 135,00 in year 2 and 210,000 in year 3 for a total of 420,000. This is less than .1% of the growth expected in the market over the next 3 years. Mejuba believes this to be a very conservative estimate.

Sales - Pay for services listed below are based on either 7% or 2% (annual) of the subscriber base using these services. These percentages are established from feedback during the beta launch and research from competing sites.

Sales - Subscriptions – Mejuba projects 30% of their subscribers a year will use our Pro subscription service that will cost \$100/per year.

Sales - Print Services – Mejuba projects 7% of their subscribers a year will use one of the print services. With very low yearly spending of \$6.

Sales – Back up of all files- Mejuba will offer back up of all files for a monthly cost of \$4 per month. Nearly 25% of our current users have said They would use this service but we have conservatively used 10% in our pro forma.

Sales - Ecommerce – Mejuba will offer its users the opportunity to buy cameras, video cameras, lens, and other photographer related items . We have conservatively estimated that nearly 5% of our users will spend \$1000 every 5 years or/ 200 per year.

Cost of Goods – There are two categories for COGS. First, the direct cost of running the website. Second, the costs associated with revenue generating services.

Network Operations Center – This is the operational cost of server farm and bandwidth to service the website. This cost is directly associated with the number of subscribers and scales accordingly.

Programming – This is the operational cost to keep user applications regularly updated. Examples are Iphone, Android, Windows, desktop, etc. apps that users use to connect to Mejuba.com. See detail of expenses in Use of Funds Section

User Interface – User interface is the graphical interface users see on screen. Separate from actual application programming but related, the user interfaces have regular updates and apart of the direct costs. See detail of expenses in Use of Funds Section

Print Services – Printing cost of photos has a very small profit margin, approximately 8%. Printing of mugs and tee shirts has a much higher margin of 15-20%. Because the mix of products customer will choose is too difficult to project, Mejuba is projecting a 90% cost of sales on printing services. This will generate a conservative 10% profit margin.

Ecommerce- Mejuba expects to retain roughly 10% from the sale of camera related goods
